Our new climbing Lima Bean makes it possible for anyone who wishes to devote a small corner of greenhouse space to it, to have lima beans all through the Winter. It may be grown on benches or in tubs and trained against the glass or on cane stakes. It is a rapid grower; the foliage is small, hard and clean. Pods are borne in large clusters three to four beans to the pod; the beans are small, very tender and true lima bean flavor. Pt. \$3.00, qt. \$5.00.

ASPARAGUS ROOTS

The Asparagus bed should be made where it can remain undisturbed for a number of years. Less than 50 roots will be useless as a family supply, 100 roots will supply the average family. If the ground is dug 12 to 15 inches deep in April and the roots set they will start growth at once; thus Winter killing is avoided. Regardless of the size or age of roots planted, do not cut Asparagus the year you plant it. Two and three-year-old roots are the best to plant.

ENDIVE

One of the best salad plants especially valuable for Winter use. For the first crop, sow about the middle of April; for succession, small sowings may be made every month until August, when the main planting is made. Sow in shallow drills and transplant to one foot apart in rows 3 feet distant. When almost full grown they must be bleached; this is accomplished by gathering the leaves and tying them at the top to keep the light and air from the inner leaves, which will become bleached in three or four weeks.

Green Curled. Pkt. 10c., oz. 25c., $\frac{1}{4}$ lb. 75c.

Musselburgh, or Scotch. Pkt. 10c., oz. 35c., $\frac{1}{4}$ lb. \$1.00.

LETTUCE

Thrives best in a light, very rich, moist soil. For first crop sow in gentle heat in February and transplant to 10 inches apart. For a Summer supply, sow thinly in shallow drills 18 inches apart and transplant or thin out, leaving a foot between the plants. Sowings may be made from April to the end of August.

Romaine or Cos. This lettuce differs from the Head and Loose Leaf varieties in the manner of growth, being upright and having incurving leaves which form oblong, loose heads, which when almost fully grown are tied at the top to better blanch the inner leaves. Cultivation the same as other lettuce.

Inoculate Your Alfalfa, Clovers, Cow Peas, Soy Beans, Vetches and all other Legume Crops with

Mulford Cultures

FOR LEGUMES

Alfalfa plant on left not inoculated. Plant on right inoculated with Mulford Culture for Alfalfa. All other conditions identical. This contrast speaks for itself.

Mulford Cultures contain pure, tested strains of active, vigorous, nitrogen-fixing bacteria, for inoculating seeds of legumes or soil. Enormous numbers of these very valuable and desirable bacteria are thus available to you in every package of Mulford Culture and may readily be applied to your seed. The sealed bottle insures purity.

**Increase Your Crops

Kennedy's "Green Velvet" Lawn Grass Mixture

The above photograph shows our lawn grass growing on the estate of H. I. Pratt, Esq., Glen Cove, L. I. Mr. F. O. Johnson, superintendent, has been using our grass seed for the past five years.

KENNEDY'S GREEN VELVET MIXTURE

Our Special Lawn Grass "GREEN VELVET" is a mixture of reclaimed Grasses especially selected to withstand the heat and drought of the Summer; when properly planted and cared for will produce a good lawn during the entire season. Qt. 40c., pk. \$2.50, bush. 8.00.

CENTRAL PARK LAWN GRASS

This well-known mixture contains a large proportion of permanent Grasses that grow quickly, producing a rich green sward in about four weeks from time of sowing. Central Park is very hardy and has always given entire satisfaction in any location, wherever sown. One quart will sow 15x20 feet; 4 to 5 bushels to the acre. Qt. 30c., pk. \$1.75, bush. \$6.00.

KENNEDY'S PUTTING GREEN MIXTURE

The hardest and finest low-growing Grasses are contained in this Mixture. It produces a beautiful and lasting green turf calculated to withstand hard wear and tear. Qt. 40c., pk. \$2.50, bush. \$8.00.

KENNEDY'S TERRACE MIXTURE

A mixture of strong, deep-rooted Grasses for banks or terraces. Although the Grasses are strong and deep-rooted, they will produce a fine, green, velvety surface, and also prevent washing away during heavy rains. Qt. 40c., pk. \$2.50, bush. \$8.00.

TENNIS COURT MIXTURES

This mixture is made up of deep rooting permanent grasses with a view of forming a close dense turf which will stand being played on a great deal without showing any wear or tear. 20 lbs. to bushel, \$8.00.

KENNEDY'S RENOVATING MIXTURE

This mixture has been tried in a great many sections of Long Island for the past two years, and has given excellent results, especially during the drought of the last season. It contains grasses which grow especially well on light or sandy soil. On account of the many deep rooting grasses contained in this mixture we especially recommend it for renovating lawns which have become bare in spots. Qt. 30c., pk. \$1.75, bush. \$6.00.

Our "Green Velvet" as a Grass Path Mixture

The above photograph shows our lawn grass growing on the estate of Bradley Martin, Esq., Westbury, L. I. Mr. Paul Fritch, Superintendent has had results with our grass seeds, where others have failed.

KENNEDY'S MIXTURE FOR SHADY PLACES

This is a mixture of extra fine Grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other Grasses, on account of shade, have failed to make a close sward. Qt. 40c., pk. \$2.50, bush. \$8.00.

MIXTURES FOR PERMANENT HAY CROPS AND PASTURES

The good results obtained from our Special Grass Seed mixtures are demonstrated by the constantly increasing demand for them. Fall seeding is preferable, but Spring sowing will be successful if done early. In addition to the Grasses, we advise sowing 10 lbs. of Mixed Clover Seed per acre. 35c. lb.

WHITE CLOVER

The only variety suitable for lawns, very dwarf and of a spreading habit. We advise sowing white clover separately on account of the seed being much heavier than that of the finer grass seed. It has a tendency to work to the bottom of the receptacle it is being sown from and consequently the last part of the grass seed sown has

a greater percentage of clover than the first. Lb. \$1.00.

Tuxedo Park, Tuxedo, N. Y.

Andrew R. Kennedy, Inc.,
New York City.

Dear Sirs:—Your "Green Velvet" grass seed mixture permits the American Landscape Gardener of today to produce on American soil "The real old English Lawn" admired so much by American visitors abroad, and which both seedsmen and gardeners of America have been striving for years to accomplish.

Last year I seeded over twenty acres of lawn, sowing about 5½ bushels per acre, and obtained a perfect lawn in a wonderfully short time. Members of Tuxedo Park, also Tuxedo Golf Expert, Mr. Harry Vinell, visiting here, pronounced the turf produced from your mixture as the finest they have seen in this country.

I can therefore recommend your "Green Velvet" to all estate owners who desire a perfect lawn.

Yours very truly,
(Signed) David S. Miller.

Gardener to J. Insley Blair, Esq.

MEDIUM

Bubach (Pistillate). The fruit is firm, of good flavor, dark rich color and pleasing appearance.

McKinley. One of the largest; immense berries; very productive; fruit of high quality.

Hunn (Perfect). A late variety, very productive, large size, uniform shape, dark crimson, firm flesh of the finest flavor. A strong grower and latest sort grown.

Joe Johnson. This wonderful new variety will undoubtedly find a place with most growers. It produces a much larger plant than Chesapeake, while the berries are larger and of finer flavor. A good canning variety. \$5.00 per 100, \$45.00 per 1,000.
